

Improve your Productivity with Better Tracked Solution

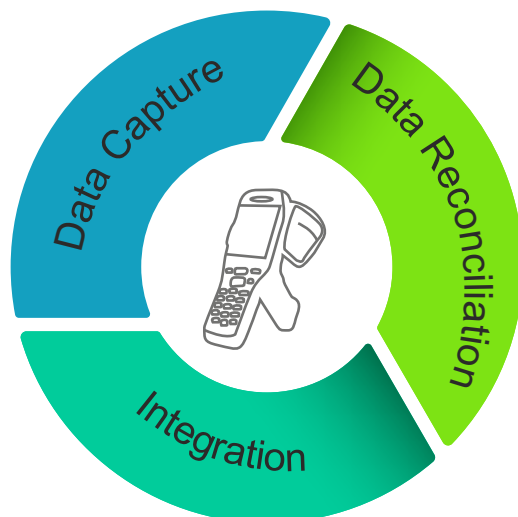

Overview

An Asset Tracking System combines desktop software, RFID, Barcode Scanners, Barcode Labels, and Mobile Devices to Streamline the Tracking of Assets (e.g. equipment, items, tools, etc.) from acquisition to retirement in an organization. This could be a small office or multiple facilities spread across the country.

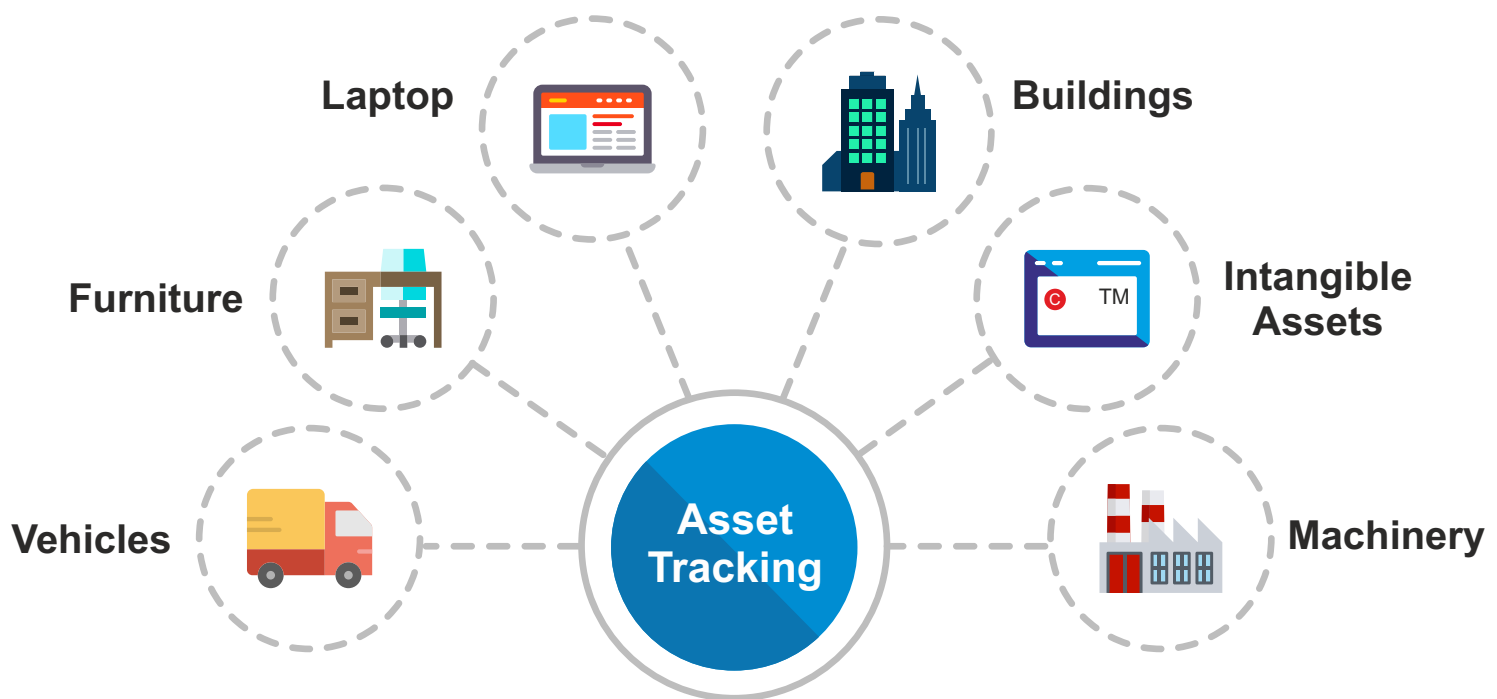

Benefits

- ➔ Effectively Manage
- ➔ Risk Reliable Decision making
- ➔ Improve Asset Performance
- ➔ Increase Productivity and profits
- ➔ Enhance Business growth and improvement

How Asset Tracking Works

At its core, asset tracking works by performing three main functions — documenting asset attributes, location identification, and tracking movement. There's other activities that take place such as taking pictures, capturing signatures when items move, scheduling maintenance events, performing maintenance events, depreciation calculations, and many more.
