Specification Sheet

Track and monitor when employees start and stop work, automate your workforce with efficient processes by significantly lowering labor costs. PBC215 Beacons are assigned to employees or workers at manufacturing or job sites, depending on the area to cover, either indoor or outdoors, you may require multiple gateways to receive signals from the beacons. Gateways can be easily setup on the wired, WiFi or GSM network varies based on project specifications. Our cloud-based software receives information from gateways in real-time, reports are processed and compiled from actual data to assist management in making strategic and proactive decisions.

PBC215 BLE Beacon with SuperBeacon app and TimeMan cloud-based software for tracking patients and staff members in real-time records. This easy to use software helps healthcare administration and senior management & HR to improve in-patient safety, serviceability, and hospital maintenance. By using sensor beacons, environmental data could be also collected to maintain temperature and humidity inside the facility. Using the software along with the beacon and gateway devices allows accurate tracking, attendance, security monitoring and safety of your operation at your healthcare facilities
