Track your workforce, their productivity and vehicles

GeoWork is used to locate employees, their productivity and vehicles with the help of online software and smartphone. The vehicle and employee location data is collected through GPS from smartphone which is later sent to the central server. A GPRS/3G /4G enabled SIM card is used to communicate between the central server, smartphone and GPS Tracking Device. User can login to our online Cloud GeoWork application from desktop computer or phone. The employee's tasks, clients and vehicle information can be viewed on an electronic map.

Courier & Transport

Geowork helps to manage customers and address list, easy to execute and track deliveries of customers and to manage employees by Google map.

Retail

Retail chains business is a fast growing business and home delivery has become one of the most competitive business components. GeoWork provides end to end solution for Retail chains to manage their customer orders, deliveries and employees management.
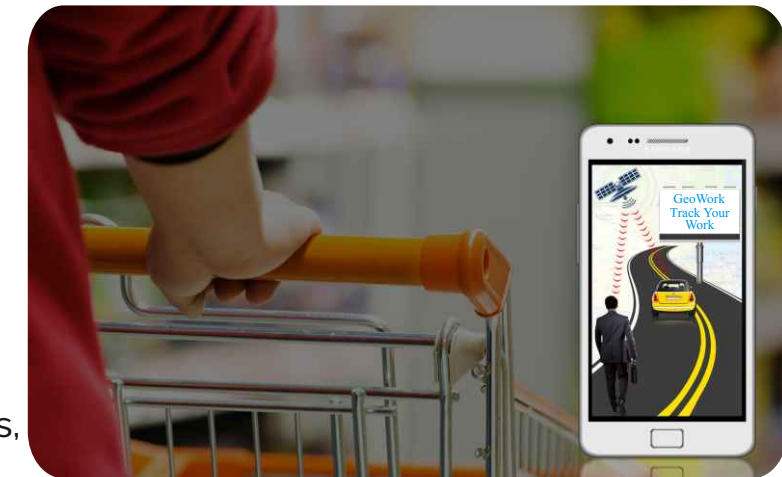

Restaurant

Restaurant chains can use this for food deliveries where customers can view and track their order status live. Restaurants can deliver customer order through drivers where drivers get all order details including customer locations thru google map on smartphone app, which is assigned to them by the restaurant.
