

CUSTOMIZED

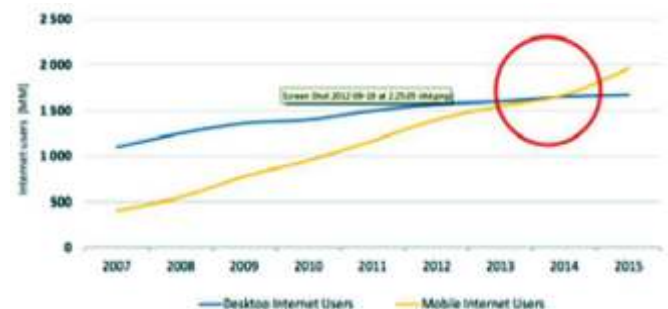

MOBILE APPLICATIONS

To enhance interactive communications
With customers and clients

Why would you need a Mobile Solution from Pegasus?

Your customers, prospects and workforce are constantly accessing the online world while working, sitting at home, traveling or even walking to meetings. It is now imperative that your business has considered mobilising your key IT applications.

Organisations around Kuwait are benefitting from improving business processes by providing their users and their staff with access to applications via their mobile devices and tablet PCs. Virtually all applications today should be designed specifically with mobility in mind, offering the desired functionality on a small screen to be used with a touch interface.

The increase of people accessing the internet via mobile devices vs. desktops since 2015

- Business analysts

Our Technical Capabilities

Our development team has specialist knowledge and skills in the following technologies:

Development

- IOS
- Windows 8
- Android
- .NET

Integration

- Web services

Our Technical Approaches

PEGASUS builds applications using leading edge technology. This means your new application will be innovative, integrate seamlessly with your current IT systems and either hosted on premise or in the cloud. Depending on your requirements we can offer the following approaches:

HTML5 Mobile Website

This is the most cost-efficient way to bring your application on to a mobile. It ensures you're your application will be available from anywhere with web access and is supported by all current smart phones.

Cross Platform Frameworks

By using one of a number of frameworks the application only needs to be built once and then compiled for different operating systems. PEGASUS uses leading developing tools to cover the cross-platform challenge. This approach offers local installation without the need for internet access. Supported by a number of current smart phones it involves lower development costs.

Native Applications

Each operating system has unique application requirements. Using native development tools, PEGASUS can build fully-tailored solutions that provide an optimal user experience suited for each device and platform. It can be installed locally, does not require internet access and has the ability to utilise all features of the device to its full potential.

Our Customer Successes

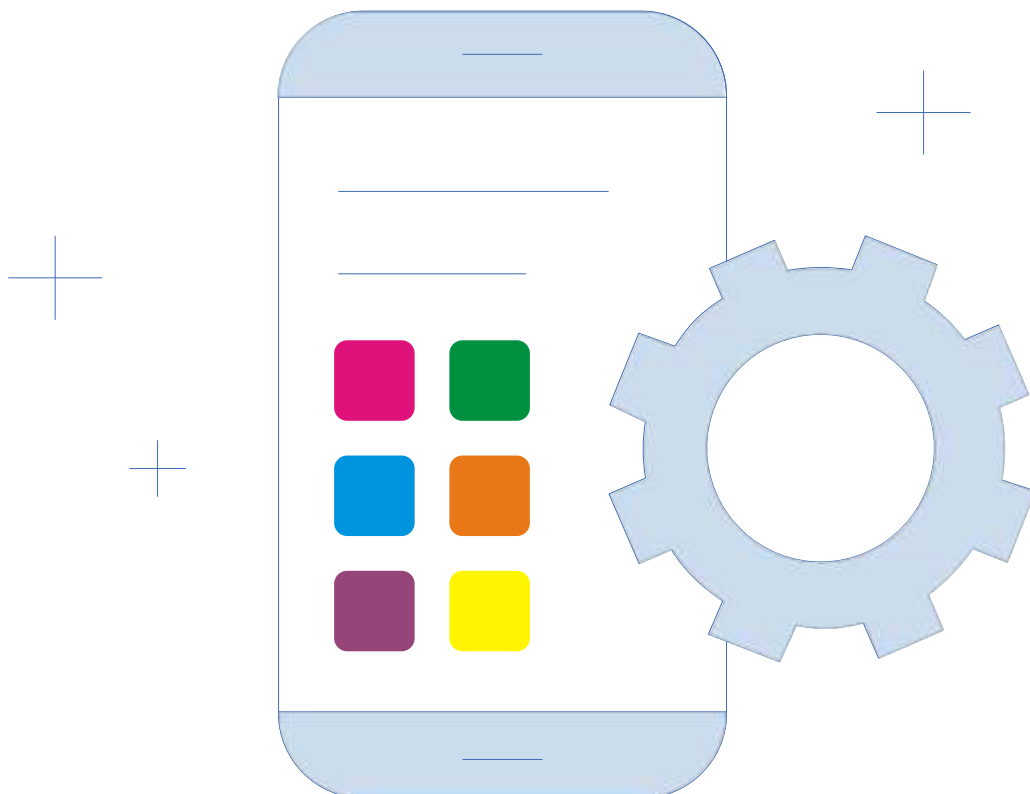

As a leader in building mobile business applications within Kuwait, PEGASUS recognised for delivering innovative, unique and successful projects that drive positive outcomes for our customers. Falganium Kuwait represents one such success.

Pegasus Intelligent Transportation System (PITS)

PEGASUS, along with alganium, developed the Electronic trip Record System the first weight based system in Kuwait to use an android PDA mobile application.

Access to accurate, consistent and real-time transmission of truck records is critical to KOC service which relies on the integrity of those records for immediate response and continuity of Trip care into KOC and other facilities. Previously, Alganium had relied on time consuming, error prone, carbon copy paper forms which had to be filed from the depots and sent to the central office for processing and data entry.

The solution has transformed the way Truck Loading process officers capture and process Trip care data in every case attended by Alganium Kuwait.
